

## Specification Amendments

On page 7, lines 16-17, make the following changes:

**AK 1 Application of Interleaving of Half Rate Channels Suitable for Half Duplex Operation to GERAN (GSM EDGE-(Enhanced General Packet Radio Service) Radio Access Network)**

On page 4, lines 22 – 28, make the following changes:

**AK 1 FIG. 12 illustrates the temporary block flow of messages between a mobile station and a base station of a network using GERAN techniques during an end uplink traffic procedure.**

**AK 2 FIG. 13 illustrates the temporary block flow of messages between a mobile station and a base station of a network using GERAN techniques during a start downlink traffic procedure.**

**AK 2 FIG. 14 illustrates the temporary block flow of messages between a mobile station and a base station of a network using GERAN techniques during an end downlink traffic procedure.**

**AK 2 FIG. 15 illustrates the temporary block flow of messages between a mobile station and a base station of a network using GERAN techniques during a reassign uplink traffic channel procedure.**

On page 5, lines 1-2, make the following changes:

**AK 3 FIG. 17 illustrates the temporary block flow of messages between a mobile station and a base station of a network using GERAN techniques during a reassign uplink control channel procedure.**

On page 5, lines 8-9, make the following changes:

**AK 4 FIG. 20 shows a multiframe diagram which is very similar to FIG. 3 showing a known a GSM half-rate traffic channel structure.**

On page 5, lines 20-23, make the following changes:

**AK 5 FIG.26 is a diagram illustrating bursts using 0246/1357 interleaving on which a downlink talkspurt may start for a Class 1 mobile station.**

**AK 5 FIG. 27 is a diagram illustrating bursts using 0123/4567 interleaving on which a downlink talkspurt may start for a Class 1 mobile station under different conditions than FIG. 26.**
